ANKIT KUMAR SHARMA

Bengaluru, Karnataka | +91 73185 60489 | ankit.personal11@gmail.com | linkedin.com/in/ankitt007 | github.com/ankit-0-7

SUMMARY

Python and backend engineer with over a year at Cognizant on a production Azure platform that uses large language models to validate duplicate vendor invoices. Promoted to Programmer Analyst in June 2026. Supported and optimised Python Azure Functions built on Azure OpenAI, and delivered full-stack features in C# / .NET and SQL Server.

EXPERIENCE

Cognizant *Bengaluru, Karnataka*

Enterprise AI platform for duplicate vendor-invoice validation — Python, Azure Functions, Azure OpenAI, C# / .NET, SQL Server

Programmer Analyst *June 2026 – Present*

- Delivered region-based access control end to end: an admin screen to provision, modify and revoke user access and assign regions, plus a post-login region flow that scopes every screen and dashboard metric to the reviewer's regions.
- Standardised the invoice review workflow by replacing a free-text justification field with a 20-value predefined reason list, keeping free text as an optional remark — making review reasons reportable and comparable for the first time.
- Added reviewer attribution, a personal "My Queue" screen for tracking submitted invoices, and Status and Reviewed By fields in the dashboard listing and filters.
- Wrote and altered SQL Server stored procedures and table schemas in SSMS to support region scoping, reviewer tracking and the new review-reason lookup.
- Implemented the backend changes in C# / .NET and released them through Azure DevOps YAML pipelines across development, SIT and UAT environments.

Programmer Analyst Trainee *July 2025 – June 2026*

- Supported two scheduled Python Azure Functions in production — one extracting invoice entities with Azure OpenAI (GPT-4.1 family), one comparing invoice pairs to classify duplicates — across a workload of 1,500+ daily comparison transactions with a fixed morning report deadline.
- Triaged daily run failures from Azure Table Storage error logs and AKS pod logs, tracing root causes across Blob Storage inputs, extraction output, OpenAI rate limiting and per-transaction timeouts.
- Reviewed Python pull requests for both batch jobs and contributed optimisation changes, including releasing large in-memory objects and explicit garbage collection after each invoice to address memory growth found in performance testing, and tuning thread-pool worker counts for throughput.

Intern *March 2025 – June 2025*

- Completed Cognizant's training track in chatbot development, SQL and cloud fundamentals (Chennai); built a JWT-authenticated Node.js and React application as the training deliverable.

PROJECTS

Xpense AI *Feb 2026*

Python, Facebook Prophet, Llama-3 (Groq API), Node.js, Express, MongoDB, React.js

- Built a full-stack expense tracker backed by a separate Python analytics service, developed independently outside work hours.
- Implemented 30-day spending forecasts using Facebook Prophet over the user's historical transaction data.
- Integrated Llama-3 through the Groq API to turn raw transaction history into plain-language spending insights and alerts, with a React front end and live multi-currency conversion.

FluentFrames *Nov 2024*

Python, OpenCV, TensorFlow, Librosa, Google Speech Recognition, Hugging Face — academic project, team of 2

- Built a Flask application that analyses presentation videos, classifying speaker posture with a CNN and transcribing speech to measure pace, filler words and long pauses.
- Generated written delivery feedback by passing the extracted metrics to a Hugging Face LLM API.

EDUCATION

RNS Institute of Technology *Bengaluru, Karnataka*

B.E. in Artificial Intelligence and Machine Learning — CGPA 8.71 *2021 – 2025*

Certifications: Microsoft Azure (Udemy) | Docker (Udemy) | Data Science and Python (Guvi)

SKILLS

Languages: Python, SQL, C#, JavaScript, Java, C++

AI & ML: Azure OpenAI (GPT-4.1 family), prompt engineering, LLM-based document extraction, Hugging Face APIs, Prophet, scikit-learn, TensorFlow, OpenCV, Pandas, NumPy

Python & Backend: Flask, REST APIs, multithreading and multiprocessing, Azure Functions, Node.js, Express.js, .NET

Databases: SQL Server (T-SQL, stored procedures), MySQL, MongoDB

Cloud & DevOps: Azure Blob & Table Storage, AKS, Azure DevOps (YAML pipelines), Docker, Git, GitHub

Frontend: React.js, Tailwind CSS
